CLLOT DE CHILL

1 h. 45 min. to 2 h.

Cllot de Chill is a small valley with a refuge located in the *Eriste* (*Grist*) valley.

Once in *Eriste* (or *Grist*) take the narrow asphalt road that departs from the town *Aragonesas*, goes uphill to the pipe of the power station, and there joins a forest trail, which is usually in rather good condition. At the end of the trail (1,505 m.) and opposite the *Espingantosa* waterfall, there is a concrete bridge that crosses the river. On the other side you will find a path to the *Forcan*: do not take it. Before getting there, take another track on the other side, on the right slope of the mountain that ascends to the *Cllot de Chill*. After a while, there is a deviation to the right. The path goes up till you get out of the woods and see the valley and the refuge.

Beautiful walk highly recommended for the whole family.
